

# Trading Routine of AR

My dear people I am a full time trader AR and here I am gonna share you guys that what I will do as soon as I enter into the chart

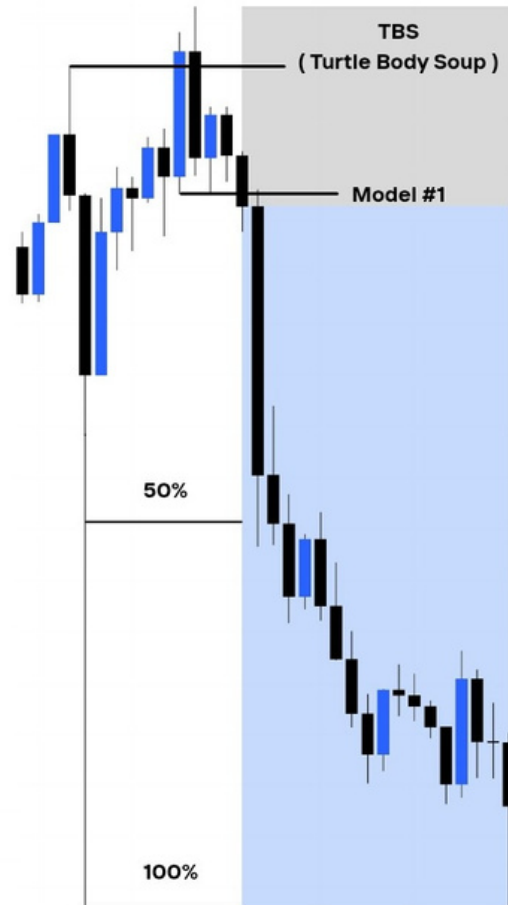

At first I used to open my trading view and I will check all the pairs one by one by but at first I used to check the main pairs as EURUSD,GBPUSD,AUDUSD,USDCAD,USDCHF,NZDUSD

Only if I have no setups on the mains pairs I used to analysis  
the sub pairs...

1 day - HTF

1 hour - LTF

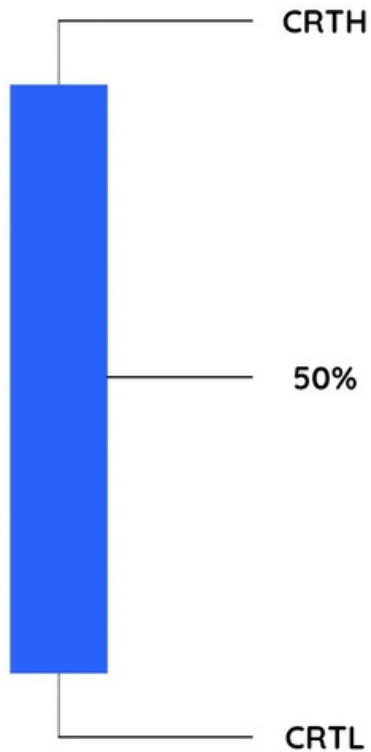

The major timeframe I  
used to use on my  
trading routine is  
1 day HTF + 1 hour LTF

So now let us come to the point

AR  
@ashikruben369

## Criteria of **CRT** Candle

### **Step : 1**

The body of the candle should be high

### **Step : 2**

The wick of the candle should be low

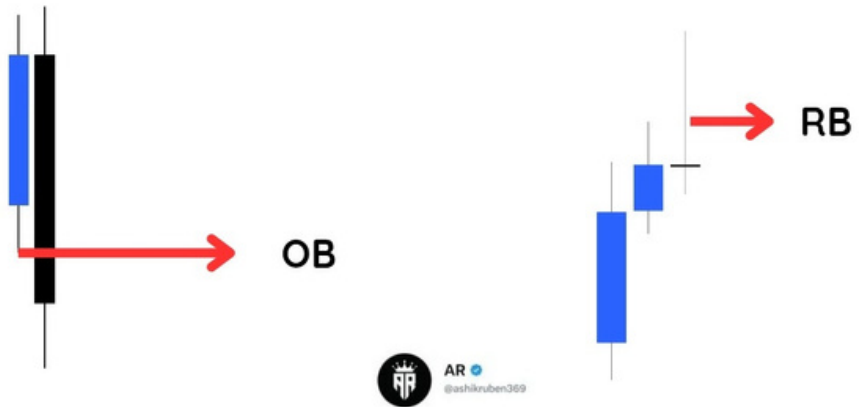

### **Step : 3**

A perfect CRT Candle is ready

After choosing the pair with my higher timeframe I used look for an valid CRT Candle at first

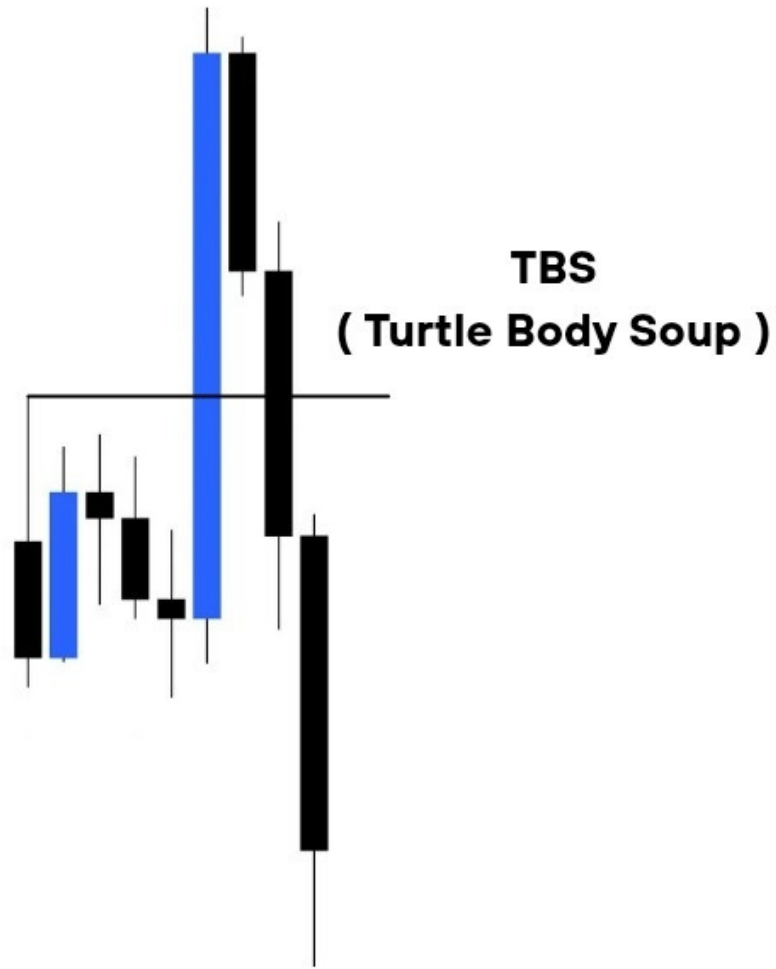

The four major CRT keylevels

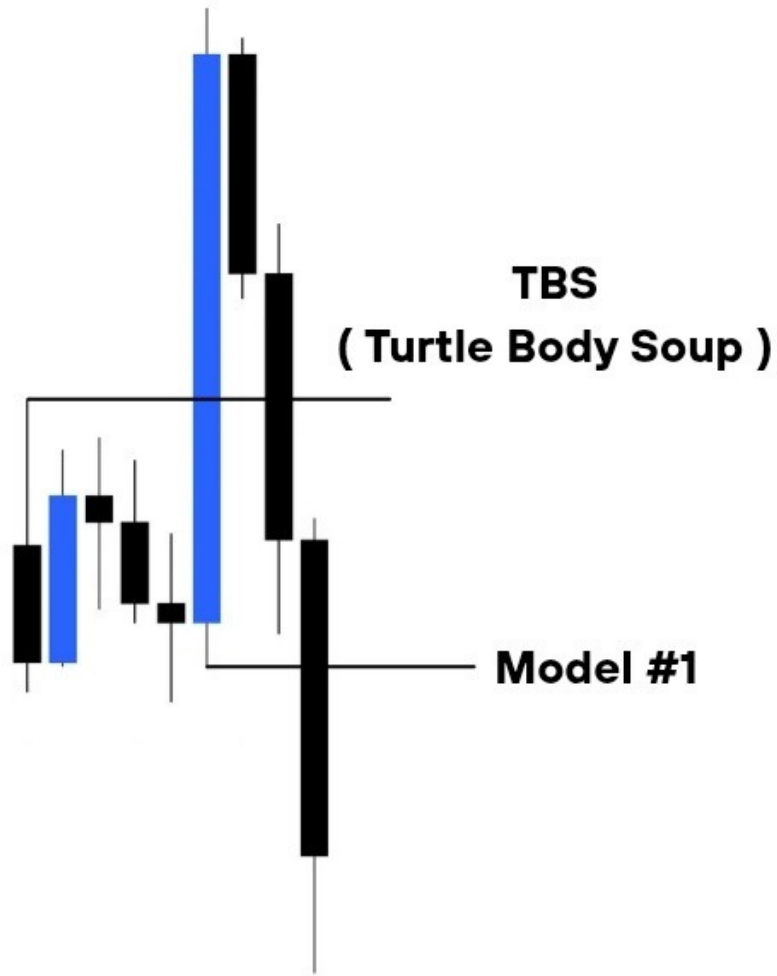

Only after I got a valid CRT Candle I used to look for an keylevel at the same timeframe where I choosed my CRT Candle

Now, after confirming my HTF with CRT Candle and Keylevel, I used to switch my chart to LTF

At LTF, at first I used to look  
for the CRT entry method  
TBS ( Turtle Body Soup )

Only after I got a valid  
TBS ( Turtle Body Soup )  
I used to look for the  
Model #1 confirmation  
and I will place my entry  
with stoploss and  
takeprofit

My dear people this is how I used to analysis my  
chart and I used trade for my self...
