

# Ways to allocate **fund** for trader's

AR 

@ashikruben369

Hello traders, I am  
**AR**, the founder of  
the trading strategy  
**CRT + TBS**

**Here I am gonna share the knowledge of  
how to allocate a good capital for trader's  
in a easy and simple way...**

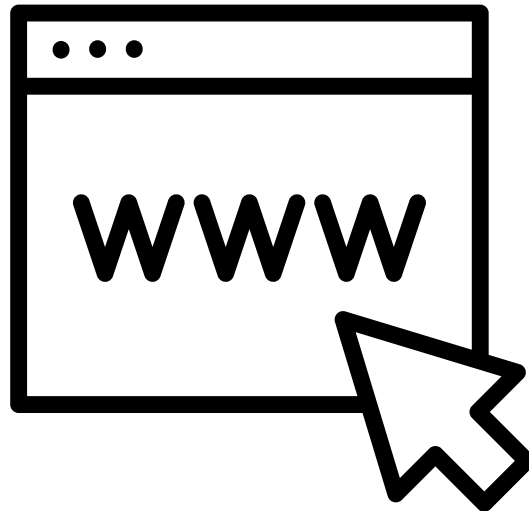

**In the modern trading world there is a system called propfirm ( Proprietary Trading Firm ) which gives traders a big capital by paying a small fee**

**Now let's see about how does a propfirm works ?**

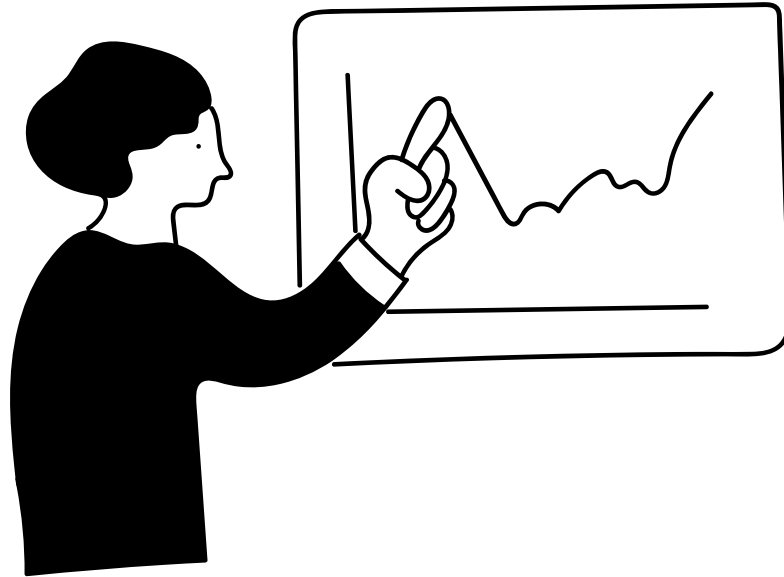

**Actually what a propfirm do is they collect a small fee from the trader and they give us a big capital, which means there are lot of propfirm websites ...**

**We need to choose any of the propfirm website and we need to choose a account size based on our budget ( for example if we pay \$20 we will get an logins for the capital of \$5,000 )**

**In that capital there we need to prove ourselves  
of making the account gain approximately 8%  
on phase 1 and the 5% phase 2 after this  
approximate of 13% gain we have proved that  
we are a real trader...**

**Now after this approximate of 13% gain the next percentage of gain we used to take is our profit and we can withdrawal it by 80% to 90% based on the propfirm and 10% to 20 is propfirms commission**

**Also there are lot of account size with different packages...**

**Note : I won't recommend any of the propfirm personally because only you need to analysis it based on your budget and ratings because every propfirm have different packages and rules for trader's...**

**One more thing I need to say you all...**

**In trading broker we need to deposit a capital to trade but in a propfirm they used to give as a capital by collecting small fee and conducting a test to prove us...**

# Conclusion

**Propfirm is a new era in the trading industry...**
